National® Oil Seals

A Trusted Name in Oil Seals for 60 Years

National from Federal-Mogul has been a trusted brand of replacement parts for more than 60 years proudly made in USA. Our oil seals feature our proprietary RediCoat sealant, designed to provide a proper seal in spite of minor bore imperfections. National offers a variety of sealing designs that match virtually any original equipment or aftermarket application, with a selection of premium sealing compounds to provide solutions for the most demanding applications.

National Oil Bath Seals -

The National Oil Bath Seal line provides complete coverage for all medium- and heavy-duty wheel end replacement applications and sets the standard for the industry.

National also has pioneered the design and use of polytetrafluoroethylene (PTFE) oil seals for commercial-vehicle wheel end applications. The company's patented lay-down sealing lip design ensures long life in spite of extreme temperatures, shaft imperfections, shaft/bore misalignment and excessive shaft thrust or movement.

National® Redi-Sleeve™

Are designed to repair damaged shafts or protect new ones

The Redi-sleeves are precision stainless steel wear sleeves, designed to be pressed onto a shaft to provide an excellent sealing surface.

For grooved or worn shafts, Redi-Sleeves are a fast, inexpensive repair option. The Redi-Sleeve is simply pressed onto a shaft where indications of seal wear (such as tracks or grooves) have developed; the shaft now has a smooth, ideal sealing surface.

For new shafts, Redi-sleeves provide superior sealing and ease of future repairs; simply pop off the worn sleeve and press on a new one, when needed.
